AMERICAN BEAUTY—A most distinct and valuable variety. It is similar in type of flower and growth to the well-known Late Branching Asters, but differs in that all the large blossoms are produced on much longer and heavier stems. It is the first of a new strain of late branching habit, and of robust growth. Plants will average two and one-half to three feet in height, according to location, while the immense flowers, usually four to five inches in diameter, are often borne on heavy stems which may be cut two feet in length.

Sweet Peas Spencer Varieties

"BUTTERFLY" or "ORCHID FLOWERED"

This type of Sweet Peas is very largely taking the place of the common or grandiflora sorts. The flowers are larger, often measuring $2\frac{1}{2}$ inches across. Their beautiful waved petals are borne in clusters of 3 or 4 on long, strong stems, adding so much to their value as cut-flowers. The varieties that we are listing here are those which we consider the best of their color, and include some of the very recent introductions of special merit.

BARNARD'S SPECIAL STRAIN of GIANT DAHLIA-FLOWERED ZINNIAS are grown by Bodger from his strain of Zinnias which were awarded the Gold Medal and Award of Merit by the Royal Horticultural Society of England, a very high honor.

The *Dahlia-Flowered Zinnias* are recommended to florists on account of their large range of color and size, and their peculiar adaptability for basket work. The intensity of the shades produced make them very desirable for home decoration in baskets and flower vases.

We recommend especially the following six varieties:

Insecticides and Fungicides

Insects may be grouped into two classes: First those insects, such as aphids, scale, red spider, white fly, thrip, mealy bug, etc., which damage the plant by sucking the juice, and to combat this group either a direct-contact spray, which will corrode their bodies or stop their breathing pores, is used, or a fumigating material which will suffocate them.

The second class comprises those insects which chew the foliage, such as the caterpillar, currant-worm, cucumber beetle, etc., and these must be fed a poison which they will take into their stomachs with the leaf.
